Thawte SSL Standard

Thawte Standard certificates are 3-factor products that can secure any kind of websites through an up-to 256-bit encryption.

As most of Thawte products, Thawte SSL Standard certificate secures & authenticates your websites and is delivered along with its Trust Seal, well-known over the Internet.

trust booster

TBS INTERNET was founded in 1996 by IT security specialists to help companies comply with encryption best practices. Customers include leading companies, value-added resellers and public sectors.

Since the early days, TBS INTERNET offered a highly professional service issuing as well as installing digital certificates for its clients. As Internet usage grew and companies began to require specialized online security, it was the first to create a multi-brand digital certificate platform, securing platinum partnerships with major SSL providers.

Thanks to it's own certification authority "TBS X509" the company can provide competitive authenticated certificates very well supported in browsers.

Founded in 1995, Thawte was the first certification authority to issue SSL certificates outside of the United States.

It's international success was great and was purchased by Verisign in 2001 and then Symantec. It has recently joined forces into the DigiCert Corporation as part of the Symantec Website Security activity.

the trust seal

Equipment
Any kind of server
Any kind of browser

Functionalities
